

Tubular Management Services

At Parker Drilling, we are an industry-leader for safe, effective tubular management services and equipment that successfully minimize rig time for our customers. We have developed management systems and processes that efficiently handle oilfield tubular services, as well as, improving wellsite HSE. These systems and processes, combined with our tubular running services, deliver new levels of efficiency to your drilling operations.

Capabilities

- Tailored tubular management services for our customers' exploration and production programs
- Tubular run times improved by delivering rig ready pipe, reducing well site preparation time
- Improved HSE results with reduced manual handling and preparation of tubular at the well site
- Disciplined inventory management programs that reduce waste and minimize spend of consumables and costs associated with rig returns
- Integrated with our tubular running services, we deliver cost savings through multi skilled workforces reducing the need for 3rd party personnel at the well site
- Warehouse and yard management, reducing customers overhead costs associated with tubular inventory and consumable management

Tubular Management Services

- Warehouse and Yard Management
- Inventory and Consumable Traceability
- QA/QC Supervision
- Pipe Storage and Transportation
- Specialized CRA Tubular Handling and Transportation
- Well Site Tubular Preparation (Drifting, Cleaning, Strapping, Identification)
- Rig Returns and Repairs

Systematic Approach to Implement IMS & Best Practices Globally

Utilizing our (IMS) Integrated Management System we ensure tubular programs are performed to the highest level of quality assurance and quality control, reducing waste and non-conformance.

Standardizing Operations That Deliver Best Practice Consistently

Our Operational Discipline Playbook ensures the integration of our tubular running and management services to our rig operations standardizes our services globally delivering best practices in OCTG product installation.

Enhancing Safety, Quality and Service

Customized service delivery plans ensure continuous improvement with tubular programs, ensuring inspection and management of tubulars are in accordance with service quality and reliability plans.

Taking Tubular Preparation Off Critical Path Enhancing Well Construction Operations

Our tubular management services reduce drilling flat time by minimizing well site preparation of tubulars that are "rig ready", improving run times and reducing environmental exposure.

Tubular Running and Management Services Specialists

Our multi skilled crews of tubular management and running services are qualified to ensure tubular storage, preparation, transportation, handling and connection make up are performed in accordance with quality plans and programs, ensuring connection integrity and extended life of production.

Parker Tubular Running Services

- TRS Rig Integration
- TRS Conventional Services
- TRS Tubular Management Services
- TRS Casing While Drilling
- TRS Top Drive Casing Running Tools
