

Parker's UK Team Commences Their First Helium Gas Extraction Project

The demand for helium gas is increasing and having fit for purpose equipment is key to safely extracting it.

Background

A new customer is carrying out exploration work in Tanzania and looks to partner with a globally recognized supplier to provide pressure control equipment that will meet the requirements of the project.

Challenge:

- Ensuring the equipment met the specific requirements for this unique project
- Ensuring the customer was able to safely and effectively operate the equipment

Solution:

- All equipment supplied were OEM products and DNV Certified, meeting the client's specifications
- Training was supplied by our expert technical team in Aberdeen to enable them to maximise performance

Result:

- Customer successfully went on to extract helium with concentrations up to a ground-breaking 4.7%

Importance of Helium:

Helium's diverse properties and applications make it an invaluable resource with widespread importance in industry, science, and technology with no environmental impact.

Energy. Well engineered.
